26. (New): A handheld implement, having a handle housing that contains a carrying handle, and with a motor housing that carries a drive unit and is connected to the housing by means of an antivibration system that comprises at least one vibration-reducing element and a threaded adjusting element in communication with said at least one vibration-reducing element, wherein the threaded adjusting element is selectively actuated to adjust the said one vibration-reducing element; and  
wherein said at least one vibration-reducing spring element further includes a hollow damping element that is filled with a fluid.
27. (New): A handheld implement, having a housing that supports a carrying handle, and with a motor housing that carries a drive unit and is connected to the housing by means of an antivibration system that comprises at least one vibration-reducing element and a threaded adjusting element in communication with said at least one vibration-reducing element, wherein the threaded adjusting element is selectively actuated to adjust the said one vibration-reducing element; and  
wherein said at least one vibration-reducing spring element further includes a hollow damping element.
28. (New): The implement according to Claim 27, characterized in that the hollow damping element is filled with gas.
29. (New): The implement according to Claim 27, characterized in that the damping element consists of plastic.
30. (New): The implement according to Claim 27, characterized in that the damping element consists of rubber or a composite material.
